

Astrometric alerts for the Solar System Objects (SSO)

W. Thuillot

IMCCE, Paris Observatory, PSL Univ. , CNRS, Sorbonne Univ., Lille Univ.,
Paris, France; William.Thuillot@obspm.fr

- **GFSSO: Gaia alert follow-up Gaia-FUN-SSO**
- **NEOCP: Near-Earth Objects Confirmation Page**
- **ESASSP: ESA Space Safety Programme:**

gaia

PSL

Goals

- Reactions to new object alerts (GFSSO, NEOCP)
- Follow-up for peculiar objects (ESASSP)
- Contribution to impact risk assessment (ESASSP, NEOCP)
- Computation or improvement of the orbital parameters (all)
- Physical characterization of the objects : + photometry + spectroscopy
- Contribution to a better knowledge of the Solar System objects
- Data centralization and sharing at MPC
<https://www.minorplanetcenter.net/>

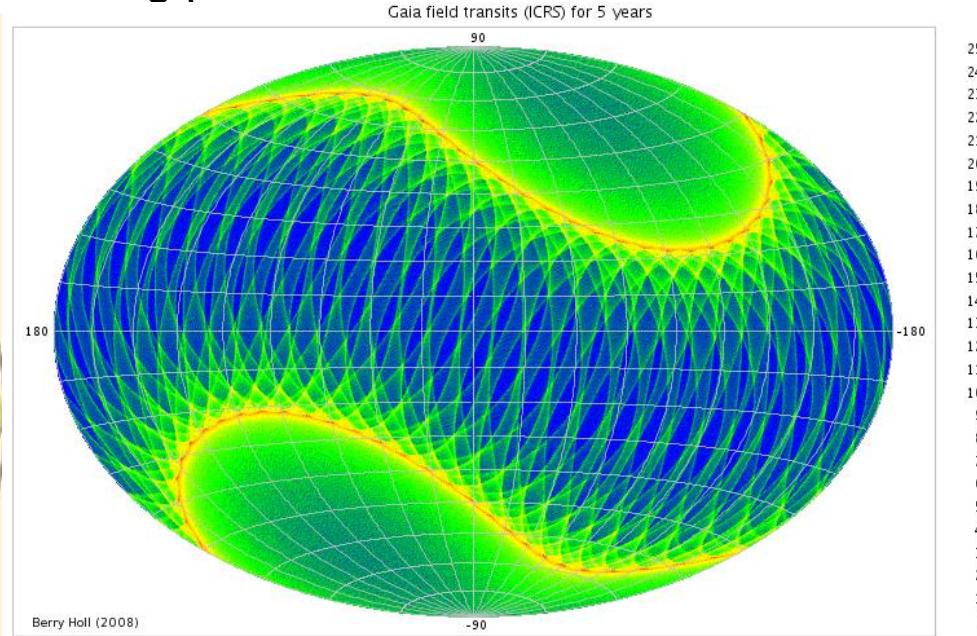

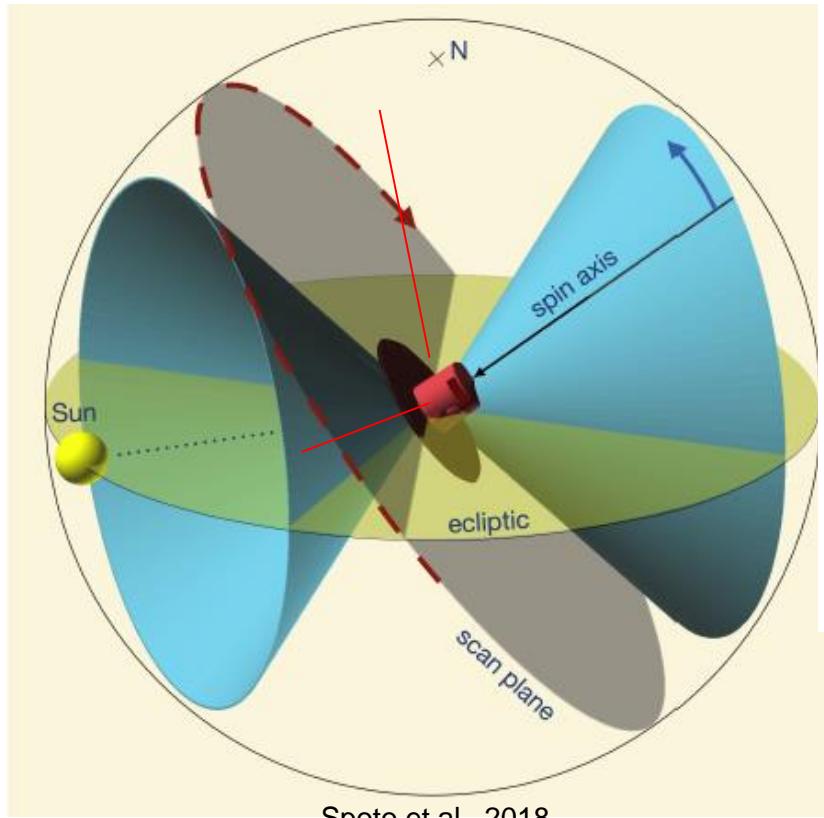

Gaia alert follow-up Gaia-FUN-SSO

GFSSO

GFSSO: Gaia scanning law

- Posted at L2 Lagrange point
- Spin period: **6h**
- Precession: **63 days** around the Sun-Earth axis
- Revolution of the Sun-Earth axis: **365 days**
- **2 lines of sight** at $106^\circ.5$ in the scanning plane

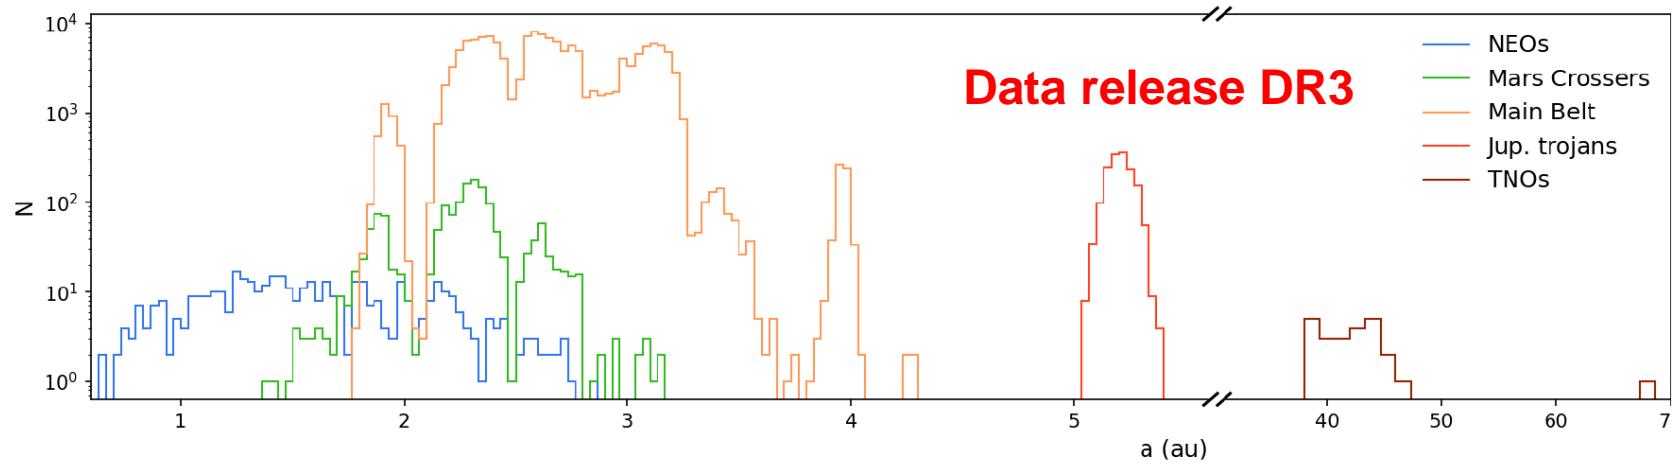

1 astrometric observation = 1 « transit » in 40s in the focal plane (7 lines of 9 CCD)

<https://www.cosmos.esa.int/web/gaia/spacecraft-instruments>

Gaia and the Solar System Objects (SSO)

158 152 asteroids of several kinds (Tanga et al. 2023)

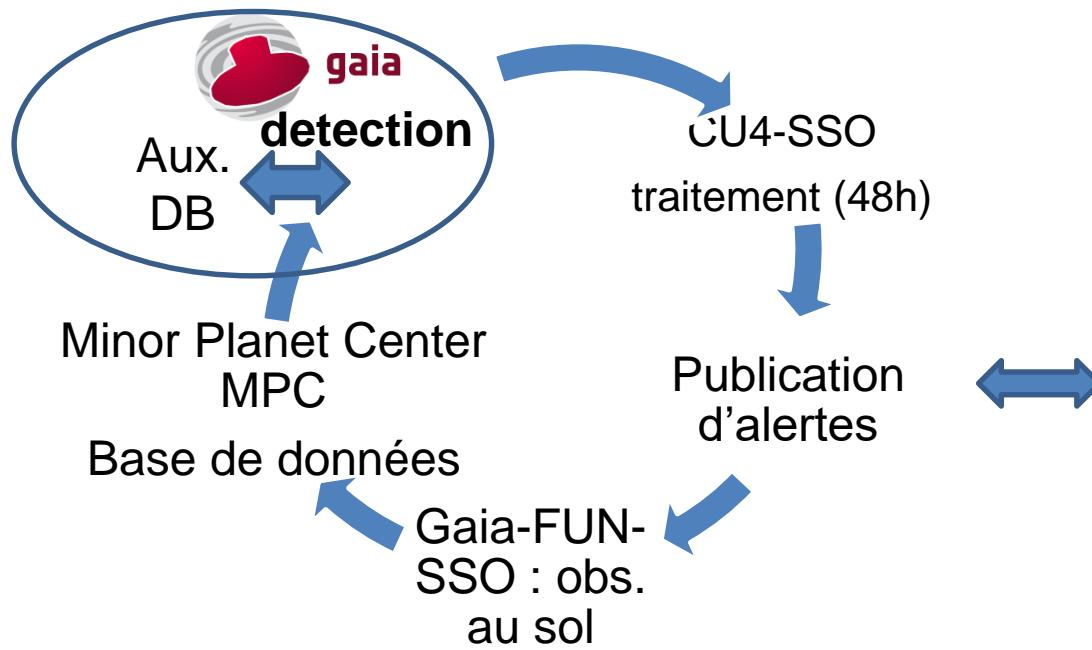

Other data can be accessed at any time:

- Gaia alerts for unreferenced moving objects
- Astrometry from ground-based observatories
- Public access at : <https://gaiafunsso.imcce.fr>
- Validation required in ~10 days

Monitoring Gaia alerts: objectives and resources

- Validate Gaia detections of potentially new objects
- Retrieve the object from the ground and position it (> 48h after Gaia)
- Improve Gaia's orbital reference catalog through MPC (loop)
- Distribute alerts (web server) for astrometry

<https://gaiafunsso.fr>

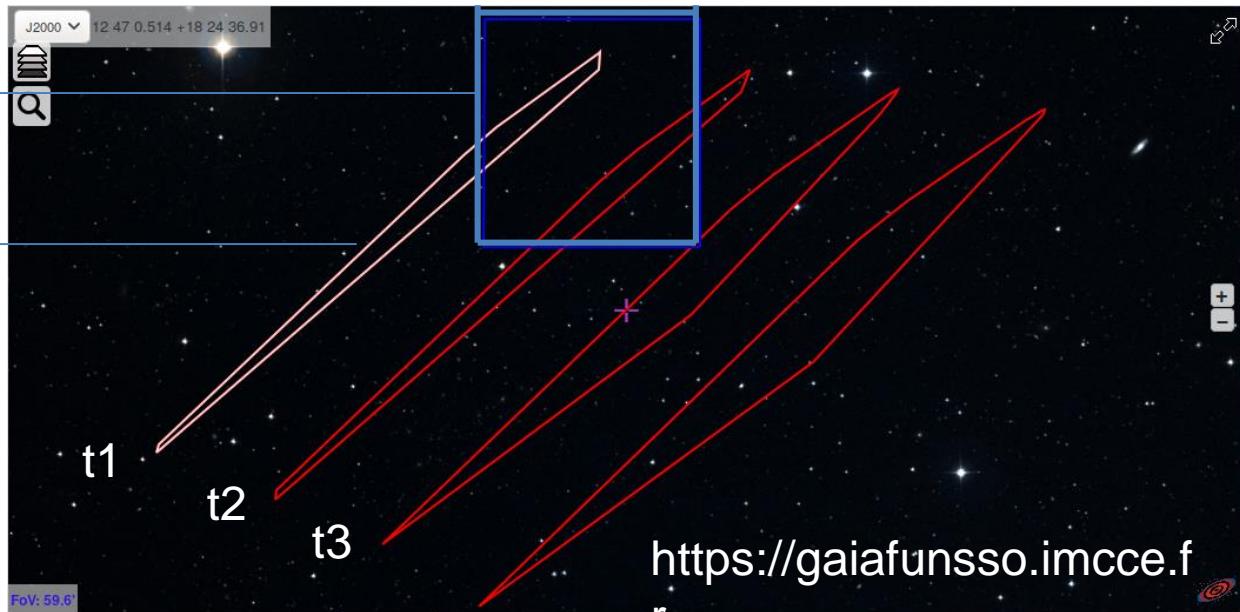

The screenshot shows the homepage of the Gaia Follow-Up Network for Solar System Objects (Gaia-FUN-SSO). It features a map of the world with observation sites marked, a 'Results and statistics' section showing data since November 2016, and a 'Workshops' section listing past events. At the bottom, there's a 'Registration' section for future workshops.

Gaia Follow-Up Network for Solar System Objects

Goal

The Gaia Follow-Up Network for Solar System Objects (Gaia-FUN-SSO) has been set up in the framework of a task (DU459) of the Coordination Unit 4 (Object processing) of the Gaia Data Processing and Analysis Consortium (DPAC). Its goal is to coordinate ground-based observations on alert triggered by the data processing system during the mission for the confirmation of newly detected moving objects or for the improvement of orbits of some critical targets. Gaia will scan the sky following a pre-defined scanning law and such ground-based observations are required to avoid the loss of newly detected Solar System objects and to facilitate their subsequent identification by the probe.

These pages provide an access to the alerts, including the ephemeris to help finding the targets, for the registered members of the Gaia Follow-up network. The network currently consists in about 80 observers in 27 observing sites, spread all over the world (January 2018).

Results and statistics

We are publishing alerts daily since early November 2016. You can find the statistics on the released alerts and on confirmed Gaia discoveries from the ground in the [Results](#) page.

[?](#) Please report bugs [here](#) in project "Gaia-FUN-SSO", or contact us at gaia-fun-sso@imcce.fr.

Potential discoveries of Solar System Objects by Gaia

This page lists all the calls, dubbed *alerts* for follow-up observations on Solar System Objects recently discovered by the [ESA Gaia mission](#), currently visible for the criteria you specified for your instrument ([W86](#)). You can obtain detailed information on each alert in the *Details* pages and report the results (positive, missed) of your observations in the *Report* pages (see links in the table).

If you observed an alert which is no longer listed below, use [this link](#) to report observations.

Detailed information on g7t002

You will find below detailed information on the target and its probable position on the plane of the sky.

Object Information

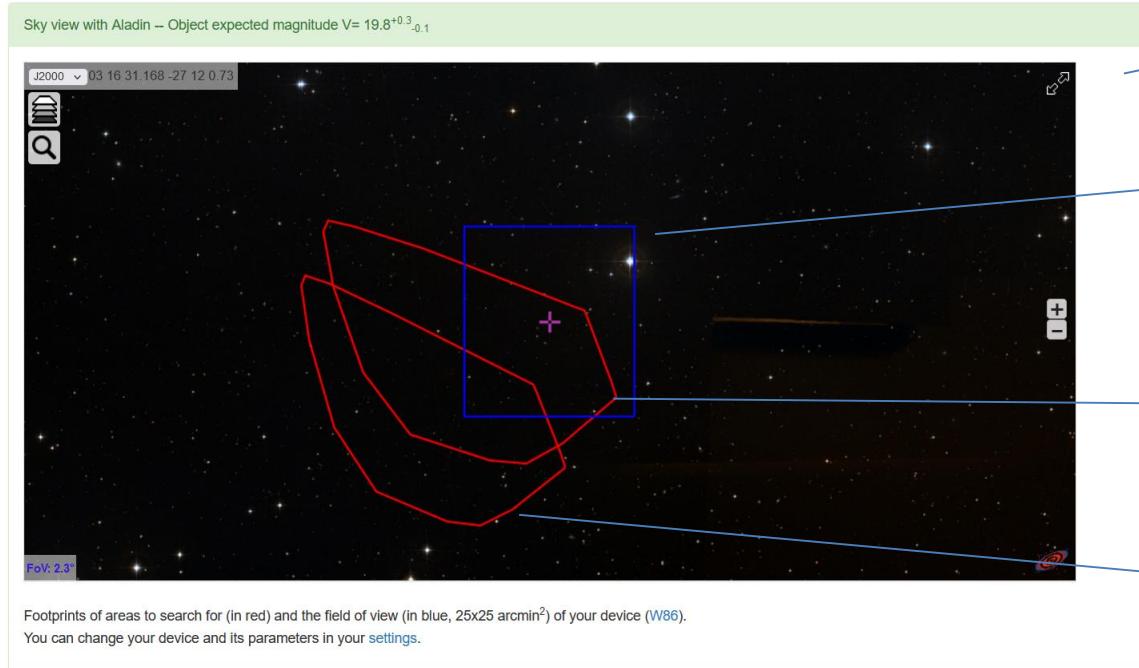

- Gaia ID: -4194910922
- Database ID: 74432
- Name: g7t002
- Magnitude (V): $19.8^{+0.3}_{-0.1}$
- Date of observation: 11/12/2023
- Number of transit: 7

ESA Space Safety Programme: ESA-SSP

<https://neo.ssa.esa.int/home>

The screenshot shows the homepage of the European Space Agency's Space Safety Programme (ESA-SSP). The top navigation bar includes links to the European Space Agency and the Space Safety Programme, along with a search bar, contact information, and sign-in options. The main banner features a background image of Earth and a large asteroid, with the text "near-earth objects coordination centre". The left sidebar contains links for NEOCC Home, About NEOCC, NEOCC Observing Facilities, Main Services (Risk List, Close Approaches List, Priority List, Removed from Risk List, Past Impactors, Newsletters Archive, CAFS Archive, News Archive), Search (Asteroids, Comets, Image Archive, Fireballs), Tools (NEO Toolkit, NEO Population Generator, NEO Propagator), and Outreach (Discovery Statistics, NEO Chronology, NEOCC Riddles, Gallery, Media Entries, Public Outreach). The central content area displays the "Priority List" with a "Faint list" option. It includes a note about the last update (2023-11-23 00:00 UTC) and a description of the priority classification system. Below this is a search interface with filters for Brightest Mag., Faintest Mag., Min. Declination, Max. Declination, and a "FILTER" button. The "Priority List" table has columns for Priority (circled in red), Object designation, Inserted, R.A. in hh:mm, Declination in deg, Elongation in deg, Visual magnitude in mag (circled in red), Sky uncert. in arcsec, and End of visibility. The table lists several近地天体 (NEO) entries with their respective details.

Priority ↑	Object designation	Inserted ↑	R.A. in hh:mm ↑	Declination in deg ↑	Elongation in deg ↑	Visual magnitude in mag ↑	Sky uncert. in arcsec ↑	End of visibility ↑
NE	Q 2023VN10	2023-11-23	04h56m	39.5	157	18.5	4	2024-01-06
US	Q 2023UC11	2023-11-23	00h48m	68.8	124	18.6	0	2023-12-20
UR	Q 2023WA2	2023-11-23	03h24m	35.5	163	18.9	3	2023-12-07

US	Q 2023VR4	2023-11-23	00h40m	27.1	135	19.1	0	2023-12-14

Conclusions

- GFSSO
 - Alerts irregularly distributed wrt time with average mag around 20
 - Detection astrometry => high precision not required
 - Contribute to the completeness of the orbital reference catalog
 - Contribute to understanding bias (a,e,i)
- NEOCP
 - Confirmation of very recently detected NEOs
 - possibly imminent impactor
 - Frequent additions and updates
- ESASSP
 - Monitoring of objects with impact risks

- Dynamic characterization: need for astrometry
- Ephemeris accuracy drift against time
- Usefulness of the observation by a network (weather)
- Data centralization and sharing at MPC
